Context

1 in 811 people in India share one doctor; over 50% search symptoms online before consulting.

Problem Statement

Problem

Many people struggle to understand symptoms and access reliable medical guidance, leading to delayed treatment and unsafe self-medication.

Impact

Patients face anxiety and delayed care, rural populations lack access, professionals lose time, and hospitals face overcrowding.

Problem Statement/Industry

WADHWANI FOUNDATION

Problem Being Solved

Many people struggle to understand their symptoms and determine whether they indicate minor issues or serious illnesses. This often leads to anxiety, delayed medical consultation, or unsafe self-medication. Limited healthcare access and confusing online information make it difficult for people to make informed health decisions.

Supporting Data

1 in 811 people in India share one doctor; over 50% search symptoms online before consulting.

Problem Analysis

WADHWANI FOUNDATION

Affected Stakeholders

Patients unsure about their symptoms; rural and semi-urban communities with limited healthcare access; elderly individuals needing frequent care; working professionals and students who delay consultations; caregivers managing health decisions; and hospitals facing overcrowding due to late-stage visits.

Impact on Stakeholders

Patients face anxiety, confusion, delayed treatment, and unsafe self-medication. Rural populations experience late diagnoses, high travel costs, and income loss. Elderly individuals struggle with frequent visits and complex information. Working professionals lose productivity. Hospitals face overcrowding due to late-stage consultations.

Root Causes

Limited healthcare infrastructure, shortage and uneven distribution of doctors, long waiting times, lack of early symptom awareness, low health literacy, dependence on informal or unreliable online information, high consultation and travel costs, and inadequate access to timely preliminary medical guidance.

Personal/Team Connect

Our team is motivated to solve real-world healthcare challenges using digital technology. We have seen people in our community struggle to understand symptoms and delay consultations due to confusion, distance, or time constraints. We want to build a solution that helps people quickly access basic medical guidance.

Target Customer Segments

Primary

Adults aged 18-60 in urban and semi-urban areas seeking reliable digital health guidance

Secondary

Hospitals and clinics in urban and semi-urban areas aiming to reduce patient overload and manage app

Customer Segment & Persona

Favourite Social Media: youtube

Favourite Offline Gathering Spots: malls

Jobs-to-be-Done

Functional JTBD

Understand symptoms, assess severity, access reliable health information, decide when to consult a doctor, book appointments easily, track basic health concerns, and avoid unnecessary hospital visits while making informed health decisions.

Emotional JTBD

Feel confident about their health decisions, reduce anxiety about symptoms, feel reassured and informed, avoid fear of serious illness, and gain peace of mind while managing their health.

Social JTBD

Feel responsible and proactive about their health, gain trust and reassurance from family members, avoid criticism for neglecting symptoms, and be seen as informed and health-conscious among peers and loved ones.

Current Alternatives

Current Alternatives

Search symptoms on Google or YouTube, use online health forums, ask family or friends for advice, self-medicate based on pharmacy suggestions, visit local clinics or hospitals directly, and use existing health or telemedicine apps for consultation.

Gaps in Current Alternatives

Online searches give unreliable or overwhelming information, causing confusion. Advice from others lacks medical accuracy. Self-medication can be unsafe. Hospital visits involve long waits and travel costs. Existing apps often lack personalization and trustworthy validation, leaving users uncertain.

Our Solution

Solution

AI-Powered Voice Health Assistant – Users speak their symptoms and receive reliable, easy-to-understand guidance on causes, severity, and recommended next steps.

Core Technologies/ Methodologies

for front end it uses flutter and Supa base, firebase for backend,it also uses google API.

Solution Design

Our Solution

AI-Powered Voice Health Assistant – Users speak their symptoms and receive reliable, easy-to-understand guidance on causes, severity, and recommended next steps.

Key Features

Our app will help you to find a medicine based on your symptoms and it also locate the nearest medical store where you find that particular medicine.

Uniqueness

it is hard to find which medicine is used for your symptoms for emergency, but this application does that work and will save lives.

Solution Format:
it is a digital service (it is like tele-medicine)

Core Technologies/ Methodologies:
for front end it uses flutter and Supa base, firebase for backend,it also uses google API.

Solution Benefits

WADHWANI FOUNDATION

Functional Benefits

Real-Time Heart Monitoring
Early Arrhythmia Detection
Instant Emergency Alerts
Symptom-Based AI Guidance
Remote Health Monitoring
Cloud-Based Health Data Storage
Quick Access to Nearby Doctors

Emotional Benefits

Peace of Mind
Reduced Anxiety About Health
Increased Sense of Safety
Confidence in Early Detection
Emotional Reassurance for Families
Feeling of Continuous Support

Social Benefits

Improved Community Health Awareness
Reduced Healthcare Inequality
Stronger Family Support Systems
Faster Emergency Response Coordination
Better Doctor–Patient Connectivity
Increased Digital Health

Macro Benefits

Healix positively impacts society by enabling early detection of cardiac conditions, reducing preventable deaths, and improving healthcare access for rural and underserved communities.

Macro Analysis

Favourable Trends

AREA	DESCRIPTION
Technology	Global shift to digital health boosts IoT, AI, and remote patient monitoring adoption.
Other	Rising heart diseases drive demand for affordable, continuous cardiac monitoring solutions.

Unfavourable Trends

AREA	DESCRIPTION
Legal	Stricter health laws and approvals raise costs and delay digital health product launches
Technology	Fast tech changes can make devices outdated, needing constant upgrades and high costs.

Data Sources:

World Health Organization (WHO) – Global cardiovascular disease statistics and digital health reports World Bank Data – Demographics, aging population, and healthcare access trends

Back-of-the-Envelope Financial Projections

Currency: Indian Rupee (INR)

Chosen Business Model: Marketplace

AREA	YEAR 1	YEAR 2	YEAR 3
Revenues	800000	2500000	7500000
Total Expenses	600000	1500000	4500000
Profit	200000	1000000	3000000

Prototype

Prototype Format

Digital mobile app prototype with symptom input, disease prediction, and doctor finder.

Functionality included in the Prototype

Prototype includes symptom input, disease prediction, precautions, medicine suggestions, doctor/pharmacy locator, and basic heart rate monitoring display.

Functionality NOT included in the Prototype

Advanced features like AI accuracy improvements, real-time emergency alerts, full cloud integration, detailed analytics, user authentication, and telemedicine services will be excluded in this initial

Prototype Validation

Number of users engaged with?	How many people liked or loved the prototype?	How many people were either neutral or mostly unhappy with the prototype?
10	8	2

Prototype Feedback

What aspects of the prototype did the users LOVE?	What aspects of the prototype were DISLIKED by the users?
Users loved the intuitive and clean interface, easy symptom input, and clear disease predictions. They appreciated the step-by-step guidance, useful precautions and medicine suggestions, and the doctor/pharmacy locator. The basic heart rate monitoring feature was also well-received for its simplicity and practicality.	Some users were neutral or dissatisfied with the limited AI accuracy in disease prediction, the absence of real-time emergency alerts, and lack of detailed analytics. A few also found the heart rate monitoring feature basic and wanted more interactive or personalized guidance within the app.

Competition Analysis

COMPETITOR NAME	TYPE	STRENGTHS	WEAKNESSES
AliveCor KardiaMobile	Direct	Accurate ECG, FDA-approved, user-fr	Expensive, limited guidance, cardia
Ada Health	Direct	AI symptom checker, intuitive, free	No real-time monitoring, limited al
Apple Watch (Health & ECG feat	Direct	Quality, trusted brand, ECG, alerts	Expensive, limited guidance, wearab
WebMD Symptom Checker	Direct	Quality, trusted brand, ECG, alerts	Expensive, limited guidance, wearab

Our Product/Service will be better than the competitors' solutions because:

Real-time arrhythmia detection with instant alerts, AI-driven symptom-based health guidance, and seamless connection with nearby doctors and pharmacies.

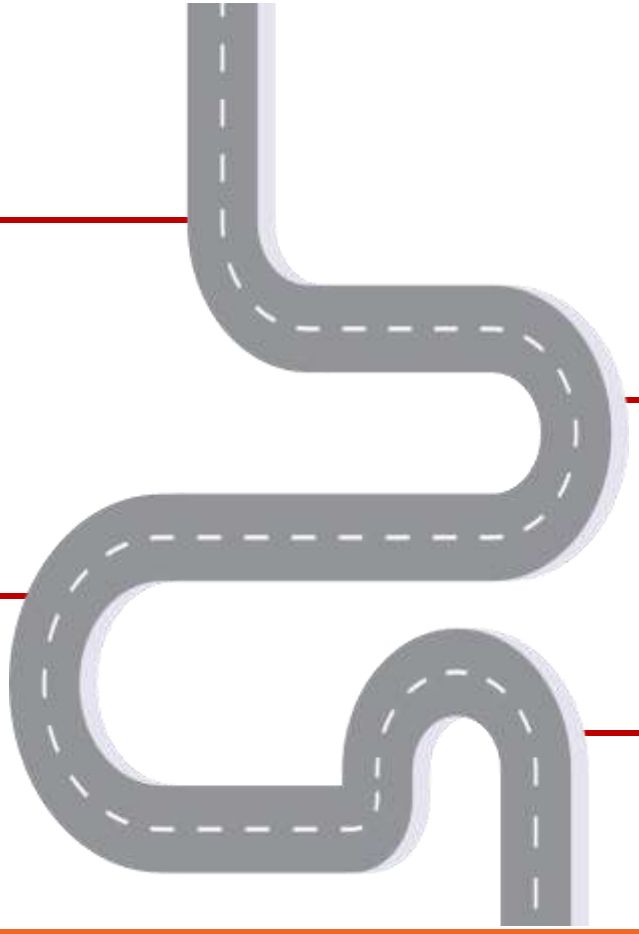
Next Steps

Goals for Months 10-12

Scale users, launch app, gather feedback

Goals for Months 4-6

Test prototype, refine AI accuracy, add doctor



Goals for Months 7-9

Launch campaigns, onboard users, add real-time

Goals for Months 1-3

Develop mobile app prototype with symptom input

Venture Viability Assessment

Venture Viability Index

91.11%

Strengths

Our venture demonstrates strong market understanding, a large and growing target industry, a clearly differentiated value proposition, and a capable, committed team. The functional prototype is feasible, and our solutions directly address real customer needs, ensuring relevance and usability.

Areas of Improvement

We need to strengthen financial projections and revenue sustainability, refine pricing and subscription models, and enhance marketing and sales strategies to generate leads more effectively. Building additional expertise in scaling operations and customer acquisition will further increase venture viability.

Next Steps

TIMELINE	GOALS	TEAM NEEDED	PHYSICAL RESOURCES NEEDED	FUNDS NEEDED
Months 1-3	Develop mobile app prototype with symptom input	4	Testdevice	Rs. 2 Lakh
Months 4-6	Test prototype, refine AI accuracy, add doctor	4	Testlabkit	Rs. 2 Lakh
Months 7-9	Launch campaigns, onboard users, add real-time	4	iotdevices	Rs. 5 Lakh
Months 10-12	Scale users, launch app, gather feedback	5	workspace	Rs. 5 Lakh

Venture Summary

OVERVIEW

We at InstaMed are committed to empowering individuals to take control of their health through AI and IoT-enabled solutions. Our platform offers real-time heart monitoring, symptom-based disease predictions, and instant access to nearby doctors and pharmacies. Currently, we are developing a mobile app prototype that integrates AI diagnostics and alerts, aiming to improve early detection, reduce health anxiety, and promote preventive care for users across urban and semi-urban areas.

Mission

Our mission is to empower individuals to take control of their health by providing accurate, timely, and personalized medical guidance through innovative AI and IoT technology. We aim to reduce uncertainty around symptoms, enable real-time heart monitoring, connect users with nearby doctors and pharmacies, and promote proactive.

Social/Economic Relevance

Many people struggle to understand their health due to limited access to timely guidance. This leads to anxiety, delayed treatment, and self-medication. Early detection, real-time monitoring, and AI-guided advice empower users, improve outcomes, reduce healthcare burden, and promote preventive care.

WADHWANI
FOUNDATION

Thank You!

Our mission is to empower individuals to take control of their health by providing accurate, timely, and personalized medical guidance through innovative AI and IoT technology. We aim to reduce uncertainty around symptoms, enable real-time heart monitoring, connect users with nearby doctors and pharmacies, and promote proactive.
